Assignment 11 Writeup

- 1. Describe any implementation choices you made that you felt were important. Mention anything else that we should know when evaluating your program.**

Nothing too crazy.

- 2. What sorts of input will cause your program to fail? In other words, what does it have trouble with?**

It has trouble with very densely packed points. If five lines are on top of each other in the middle of the screen, it has a very hard time differentiating. The reference solution refers similar behavior.

- 3. What suggestions do you have for improving this assignment in the future?**

Nothing pressing.

1 Circle, 1 Line

```
-bash-4.3$ cat 1circle-1line.txt
/ Meta information: (Do not parse it!)
// number of circles: 1
// 51 9 7
// number of lines: 1
// 21 8 91 15
100
20
